

# Evolution

## Adaptation Examples

Name:  
Period:

In the boxes below, make color drawings of two different types of animals (not frogs!) and two different types of plants. For each drawing, label at least two adaptations for that organism that help it to survive in its environment. For example, if you had drawn the strawberry dart-poison frog on a leaf (Figure 1 on p.298), you would then draw an arrow to its red colored body and write, "bright red color warns predators it is poisonous", and then find another adaptation to describe.
