

# The Hipbone's Connected to the ...

Name:

Period:

Your skeleton makes it possible for you to move. It provides your organs with protection, stores minerals, makes white and red blood cells, and supports your body. Look at the human skeleton below, and write the names of the major bones listed below in the spaces provided. Check off each box  as you put that label on the diagram. You can use Figure 1 on p. 472 to help you.

- clavicle       femur       fibula       humerus       patella       pelvic girdle
- radius       ribs       skull       tibia       ulna       vertebral column
