

## Undead Predictions

Name:

Period:

You have been asked to help write a book about surviving a zombie attack. You are to finish the predictions using the correct format (see the list below). Once you have written your predictions, draw a picture to show how you could test each one, assuming that you could find a zombie....

Remember:

- A prediction must be something that can be tested. *[ignore this one for this assignment]*
- A prediction answers a question that popped into your mind when you made an observation.
- A prediction is set up a certain way. It uses an "if...then...because" structure, to show cause and effect.
- A prediction contains proper spelling, grammar, and punctuation.

*For this assignment, your drawings may be gooey and creative. It's OK. Zombies aren't pretty. Neither is destroying them.*

PREDICTION #1: If you want to escape from a zombie,

then you must \_\_\_\_\_

because \_\_\_\_\_

***turn over for another prediction***

Work: 6 points, Assessment: 2 points

# Undead Predictions

Name:

Period:

PREDICTION #2: If you want to destroy a zombie,

then you must \_\_\_\_\_

because \_\_\_\_\_

### **Assessment**

Now, imagine that zombies actually exist. Which of the two predictions above would you like to use for an experiment? Copy that prediction into the space below.
